**Why choose TruStone Marble pavers over concrete products? Concrete paver manufacturers have tried to imitate the look of real stone for years. They know there is no comparison to the real thing. Concrete products are still just "manmade".**

## Our Product

With a real TruStone Marble application, you have an unmatched natural beauty, no two pieces being the same. When used in a patio, walkway, or pool, the blend of natural colors and textures is breathtaking. With TruStone Marble you will now have a piece of art at a reasonable cost that will last for generations. The surface underfoot stays cool comparable to the stone imitations because there are no metals in TruStone Marble products, unlike concrete which contains metals that retain heat in the summer months. Our pavers are also calibrated and rectified. Which means the use of sand between the joints is unnecessary. TruStone Marble's unique capillary action allows moisture to escape, even in the most extreme freeze-thaw cycling without stressing the materials (which is very important in Northern climates). We suggest sealing Marble pavers with a Slip Resistant Additive which is a micronized polymer. The additive is stirred into the sealer and applied to surface of paver with either a brush or roller. Since TruStone Marble has been compressed in its natural state for millions of years, it is extremely durable and has a PSI strength stronger than most concrete products.

## Colors & Sizes

Our Marble pavers are 1.25" thick and come in a variety of sizes including: 8"x8", 8"x16", 16"x16", 16"x24". Other sizes can be by special order. Marble copings/step treads sizes: 12"x24"x1.25" thickness or 12"x24"x2" thickness.

Driftwood

Blue

Calacatta

A great investment is adding 'curb appeal' to the front entrance of your home with the elegance and beauty of a Marble or Travertine walkway, steps and porch.
